

# Signed Magnitude Number representation

## Signed Magnitude representation:-

→ This can be represented by 3 different methods

1) Signed Magnitude 2) 1's Comp 3) 2's Comp

→ Range  $-(2^{n-1}-1)$  to  $+(2^{n-1}-1)$

Unsigned Signed

5  $\leftarrow$  0101  $\rightarrow$  +5

9 1001  $\rightarrow$  -1

→  $n=4$   
 $-(2^{4-1}-1)$  to  $(2^{4-1}-1)$   
 $-(8-1)$  to  $(8-1)$   
-7 to 7

→ Advantage :- Easy to read and write of signed

→ Total nos.  $-(2^{n-1}-1)$  to  $(2^{n-1}-1)$

Total nos  $\rightarrow 2^n \rightarrow 2^4 \rightarrow$  16

But total  $2^{n-1}$  representation  $\rightarrow 2^{4-1}$   
 $\Rightarrow 15$

→ 
$$(-1)^{a_{n-1}} \sum_{i=0}^{n-2} a_i 2^i$$

→ Dis :- Arithmetic ops require sign & mag

Decimal	Signed Magnitude	1's Complement	2's Complement
+7	0111	0111	0111
+6	0110	0110	0110
+5	0101	0101	0101
+4	0100	0100	0100
+3	0011	0011	0011
+2	0010	0010	0010
+1	0001	0001	0001
+0	<u>0000</u>	0000	0000
-0 →	<u>1000</u>	1111	0000
-1 →	1001	1110	1111
-2 →	1010	1101	1110
-3 →	1011	1100	1101
-4 →	1100	1011	1100
-5 →	1101	1010	1011
-6 →	1110	1001	1010
-7 →	1111	1000	1001

Signed mag

$$1101 \rightarrow -5$$

$$01011 \rightarrow +11$$

$$1100 \rightarrow -4$$

$$-6 \rightarrow 1110$$

$$-17 \rightarrow 110001$$

$$+23 \rightarrow 010111$$

$$\begin{array}{c} 1010 \\ \hline \downarrow \downarrow \downarrow \\ 1 \times 2^3 + 0 \times 1 + 1 \times 2 + 0 \times 2^0 \\ \hline +2 + 0 \end{array}$$

$$\begin{array}{c} 1010 \\ \hline (-1)(1) \times 2^3 + 1 \times 2^1 + 0 \times 2^0 \\ \hline (-1)(1) \quad 0 + 2 + 0 \\ \hline = (-2) \end{array}$$

Dis of Signed no representation

i) +0 & -0 diff representation.

Signed Extension  $\rightarrow$  Smaller no is larger  
rest padded with zero. space

$$111 \rightarrow -3$$

$$1011 \rightarrow -3$$

$$10011 \rightarrow -3$$
